

OVERVIEW VIDEO

CrewTracker · about five minutes · for prospects

BEFORE YOU RECORD

- ☐ Reset the demo: **npm run demo:reset** — all three shows, in order.
- ☐ Open the Scheduling screen and note **which weekdays the show days fall on**. §3 says them out loud.
- ☐ Sign in as **dan@theaudiosmith.com**, in **CrewTracker Demo** — not CrewTracker Shows.
- ☐ **Light mode**. The paper ground is the identity and reads better compressed.
- ☐ Phone capture ready (see over).
- ☐ **Do Not Disturb on**, Mac and phone.

§4 and §5 record against **Meridian Partner Summit**, the finished show — it is closed out, so the punch cells are locked. To film punching live, use **Northwind**, which is next week and genuinely unpunched.

RECORDING THE PHONE

Three beats are on a phone. Don't point a camera at it — capture the screen.

QuickTime and a cable. Plug the iPhone in. QuickTime Player → **File** → **New Movie Recording** → click the small arrow beside the record button → choose the iPhone. The phone's screen appears on the Mac, full size and sharp. You tap the real phone; the Mac records it.

This is also the only setup that can film **the QR scan**, because it uses the real camera.

Or iPhone Mirroring, already on this Mac — drives the phone with the mouse, but has no camera, so the QR moment won't work there.

Not the iOS Simulator. Xcode has no iOS runtime installed (a 7GB download), and it has no camera either.

Check which company the phone is signed into. **dan@theaudiosmith.com belongs to both**. Settings → Companies, second tab.

The Shows list. Still, then scroll once.

If you run or staff AV shows, you most likely already have a crew tracking system. It could be a group text, slack, a spreadsheet, or someone handwriting a time sheet.

Today I want to show you a new way I've created. This is one show in CrewTracker — from the day it is sold to the client to the day everyone gets paid.

New Show, in the order the words go:

1. Name, venue, dates.
2. The **payroll preset**.
3. Day activities — toggle Travel, Load-in, Rehearsal, Show, Load-out.
4. The **PM field**, choosing Ray Delgado.
5. Rooms: **Main Stage** and **Breakouts**.
6. Positions: A1, V1, LD on Main Stage · a Stage Manager on **show days only** · **2 × Operator** on Breakouts.
7. Finish on **Create show and send to scheduler**.

A show starts with what you already know — the show details. Add the show name, the venue, the dates.

You'll choose the payroll rules for this event. These payroll rules are specific to the way your organization pays their crew and are highly customizable on a per show basis.

Then you pick what the crew will be doing on those days. Travel, load-in, rehearsal, show, load-out. Everything else is built on that.

If you know who you want as Production Manager for this event, add them here and an invite email will be sent — if not, you can do this later.

Next, add the rooms you want to crew. In this case, it is Main Stage and Breakouts.

Now, choose the crew roles. Main Stage will get an A1, V1, and LD. We also need a stage manager for just show days, so we will add them like this. The breakout rooms need 2 operators.

Now we click create show and send to scheduler. Everyone that has the permission to schedule will get an email stating this show is ready to schedule.

This beat is a third of the video and every clause is a thing happening on screen. Rehearse it against the actual clicks once before recording.

The Needs-scheduling queue → the Scheduling screen. Let the grid sit a beat.

1. **Open** on the Camera Operator line, **first show day** → pick **Theo Lindqvist**. No warning. Books straight in.
2. **Open** on the same line, **next day** → Theo again, now reading **Already scheduled on Cypress Dealer Meeting**, button says **Book anyway. Do not press it**. Close the picker.
3. **Send email invites**.
4. **CUT TO PHONE** — the booking request. Scroll the days. Tap **Accept**.
5. **CUT BACK** — the grid, now green.

This is the scheduler screen. Select the show you want to crew.

Rooms are down the side, days across the top, every position you need and what is needed to fill.

Filling positions is one click. Theo's free, so he goes straight in.

Now the same position on the next day. There he is again — and he's already on the Cypress job that day. It won't stop you; plenty of people work two calls. It just means you find that out now, instead of at seven in the morning when he doesn't turn up.

When the sheet is full, one press sends emails to all of them at once. And this is what your crew actually gets.

(on the phone) Their days, what each day is, and two buttons. No login. No app to install.

(tap Accept, cut back) The sheet updates. You didn't chase anybody.

Say the real weekdays, not "the next day" — the demo dates move every time it is reseeded. Check the grid before you start.

4 • SHOW DAY

2:50 – 3:50

PHONE. The tracker for one room. Tap **Start** on a crew member. Then the batch bar — **Start All**. Fix one time in the editor.

CUT — the printed venue sign, then a phone scanning it, picking a name, clocking in. Then tap **Your hours**.

Show day. This is the tracker on a phone, because that's where it gets used most — in a dark room, one-handed. Tap to start. A whole room at once when the call is the same. Fix a time somebody missed.

And here's the other half for the crew. Print this sign or send the crew their links. Your crew enters without a login, finds their name, and can clock themselves in and out.

They can see their own hours, too — every day, their breaks, their overtime. Which means nobody is asking you what they worked. The time sheet and the crew hours match.

5 • PAYROLL

3:50 – 4:35

Reports. **By Day**, then **By Crew**. The Master Summary strip. Export CSV. **Send Hours** on one person. Then **Send Final Report** and the show locking.

Then the part you actually dread.

Hours, overtime, double time, meal penalties, travel — worked out while the show was happening. By day, or by person.

Export it for whoever runs your payroll. Or text somebody their own timesheet — hours only, never rates.

And when it's done, one button sends the final report and locks the show, so nothing moves after sign-off.

[Back to the Shows list.](#)

That's one show. From the sale to the payroll, all in one place — and everybody who touches it, admin, schedulers, PMs, crew, sees the part that's theirs and nothing else.

DELIVERY

- **594 words — about 4 minutes of speech** in a five-minute video. The rest is silence for the screen to do the work. Don't fill it.
- **The double-booking beat needs both halves.** A warning on its own reads as the app nagging; the clean booking first is what makes it read as the app answering. It is the one moment in five minutes a spreadsheet cannot do — let it breathe.
- **The timings are not the ones this was first written to.** §2 grew from a sentence about positions into the whole build — 73 seconds of speech. The time was moved rather than the words cut; §3 now fills its slot exactly, at 59 seconds of 60.
- **Three phone cuts** — the booking email, the tracker, the crew clock. Half this app happens on a phone in a loading dock.
- **Nothing about settings, permissions or pricing.** Those belong in the long version.
